Certifications Job Interview Preparation Guide.

Question # 1

I am just getting into this, I want to jump ahead and do the packet tracers in discovery working at a small to medium business or ISP but I am trying to get the last lab putting it all together. Does anyone have anything for this. I know it is ahead of me but I would like to get this so I can look at the beginning and understand it more?

Answer:-

First try to create an exact network diagram using CDP (If all Cisco Devices are in your network), then check the VLANS settings if any. then use Ping or tracet to check the full connectivity. GNS can be used for simulation.

Question # 12

What is the difference between dynamic NAT and NAT overloading?

Answer:-

Dynamic NAT contains multiple public IPs and when the user needs to go to WAN he will get an IP. If all IPs are used, the user must wait to get one public IP.
NAT Overloading has only one public IP and all users on the LAN network are using this IP but with different ports.
NAT Overloading is much better than Dynamic and static since it is more secure and to save IPs.

Question # 14

what is plan version in sap hr?

Answer:-

A plan version that is recognized by the SAP system as valid and in operation.

The data created in the active plan version is used for performing day-to-day business and updating cross-application data.

You must flag a plan version as active if:

- You are an SAP Business Workflow user
- You have set up integration between Organizational Management and other components

The plan version you select must contain your enterprise's current data.

All additional plan versions in your enterprise can be used to simulate organizational scenarios.

Question # 16

What is VLSM?

Answer:-

VLSM stand for Variable Length Subnet Mask. VLSM originally defined in RFC 1812, allows you to apply different subnet masks to the same class address space.

Remember that the best subnet mask for point-to-point links is 255.255.255.252(130).

VLSM allows you to use more than one subnet mask for given class address. Remember the two major advantages of VLSM:

More efficient use of address and route summarization/aggregation.
